

## CG2023 Assignment Instructions

The assignment includes four question lists that cover problems in the first four chapters of CG2023. It is to fill the possible gaps between the lecture notes examples and the tutorial questions. To encourage students to practice on these questions, we adopted it as an assessment component with 5% weightage. Please take note following instructions on the assignment.

1. The question lists will be released in a sequence. Each one will be released after all groups have discussed the related chapter.
2. Each student needs to submit a handwritten answer in PDF format to the LumiNUS assignment submission folder by 27 February midnight. You can write your answers on paper. Then scan and combine them as a PDF file to submit. There will be penalties for the later submission. It is to encourage students to try these practice questions before the midterm.
3. Marks will be awarded based on the attempt in answering the questions and not on the correctness. A set of answer keys will be provided in due course. If you have doubts about questions, please consult your group instructor.
